

- 1) A - Use SHA-256 ✓
- 2) A - fixed output X B
- 3) A - SHA-256 ✓
- 4) B - Completely changed hash. ✓
- 5) B - Data composition. X A
- 6) A - compare hashes. ✓
- 7) B - Use md5 twice. X A
- 8) A - Fixed size outputs ✓
- 9) A - md5 remains weak. ✓
- 10) B - SHA-256 ✓
- 11) A - files may have changed ✓
- 12) A - collision resistance ✓
- 13) A - collision ✓
- 14) A - Compare file hashes ✓
- 15) A - fixed output ✓
- 16) A - Recalculate and compare. ✓
- 17) A - One-way computation. ✓
- 18) A - Avalanche effect. ✓
- 19) B - SHA-256 ✓
- 20) A - Integrity verification. ✓
